Re: Des Moines, Iowa
Central Place Levee Improvements
Energy Utilization Certification

This letter is to provide a certification to the Iowa Finance Authority regarding the energy utilization of the Central Place Levee Improvements project. The project will involve construction of an earthen levee and modifying storm sewer outlet structures at the Des Moines River. The project would be classified as rehabilitation.

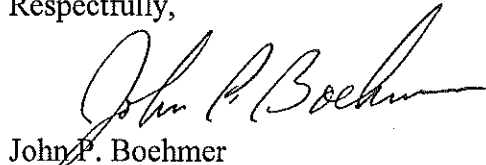

The project scope will include excavation and placement of soil for the levee embankment and modification to pump station outlets. Given the nature of the project, compliance with the current building energy code standards would not be applicable.

The Central Place Levee Improvements project does not involve the installation of any energy using equipment. Use of equipment certified under the Energy Star program would not be applicable for the project.

This letter is to certify to the Iowa Finance Authority that compliance with the current building code requirements would not be applicable for the Central Place Levee Improvements project and that the use of Energy Star certified equipment would not be applicable for the Central Place Levee Improvements project.

If you have any questions, please contact me of this office at 323-8170.

Respectfully,

John P. Boehmer
